FILE COPY

Burlington Environmental has modified the existing RCRA Part B Operating Permits for its Pier 91 (WAD000812917), Georgetown (WAD000812909) and Washougal (WAD092300250) hazardous waste management facilities. The Pier 91 Facility is located at Building 19, Box C-105, 2001 West Garfield Street, Seattle, WA 98119. The Georgetown Facility is located at 734 South Lucile Street, Seattle, WA 98108. The Washougal Facility is located at 625 South 32nd Street, Washougal, WA 98671. The Pier 91 Facility Part B Permit was issued by the Washington State Department of Ecology, effective August 26, 1992. The Georgetown Facility Part B Permit was issued jointly by the U.S. Environmental Protection Agency and the Washington State Department of Ecology, effective August 5, 1991. The Washougal Facility Part B permit was issued jointly by the U.S. EPA and the Department of Ecology effective October 23, 1992.

Modifications PRMOD1-2, PRMOD1-3, GTMOD5-9, were submitted to the Department of Ecology May 26, 1994. WAMOD17-1 was submitted to the Department of Ecology June 3, 1994 and Modification WAMOD16-1 was approved by the Department of Ecology May 6th, 1994. Per Washington State Dangerous Waste Regulations WAC 173-303-830, these changes are Class 1 Modifications.

Modifications GTMOD4-1 and GTMOD5-7, were submitted to the Department of Ecology May 26, 1994. Per Washington State Dangerous Waste Regulations WAC 173-303-830, these changes are Class 2 Modifications.

General Facility Operations

The Georgetown Facility provides for the storage and treatment of dangerous wastes in containers and tanks. There is no disposal of dangerous wastes on site. Treatment processes include distillation, solidification, stabilization, cyanide destruction, and blending of waste fuels. The facility serves industry and provides for the collection and proper management of household hazardous wastes.

The Pier 91 Facility provides waste oil recovery and blending and provides for tank storage and treatment of dangerous wastes. There is no disposal of dangerous wastes on site.

The Washougal Facility provides for waste oil and solvent recovery and the storage and treatment of hazardous wastes in containers and tanks. There is no disposal of hazardous wastes on site. Treatment processes include distillation, solidification, stabilization, and blending of waste fuels.

Description of the Class 1 Modifications for the Pier 91, Georgetown and Washougal Facilities

The Class 1 permit modifications for the Pier 91 Facility include an update of the contingency plan emergency coordinator list; and a general permit update to correct typos, addresses, etc.

The Class 1 permit modification for the Georgetown Facility updates the contingency plan emergency coordinator list.

The Class 1 permit modifications for the Washougal Facility include an extension of completion dates for container storage buildings and loading/unloading pad upgrades and revises the Ecology SW region 24 hour emergency phone number in the contingency plan.

Description of the Class 2 Modifications for the Georgetown Facility

The Class 2 permit modifications for the Georgetown facility consist of minor revisions to tank inspection procedures and secondary containment system designs.
